HEADQUARTERS UNITED STATES AIR FORCE
WASHINGTON, DC

8 JAN 2004

MEMORANDUM FOR ALMAJCOM/SG

FROM: HQ USAF/SGO
110 Luke Avenue, Room 400
Bolling AFB, DC 20032

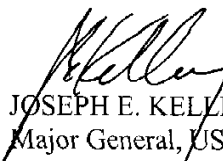

**SUBJECT: Visibility of Weapons of Mass Destruction - Emergency Response (WMD-ER) to
Chemical, Biological, Radiological, Nuclear and High-Yield Explosive (CBRNE)
Projects in the Medical Readiness Decision Support System (MRDSS)**

Effective immediately, all units supported by medical logistics activities that have Defense Medical Logistics Standard Support (DMLSS) system, Release 3.0X, will utilize the DMLSS assembly management module to account for all WMD-ER CBRNE materiel. This policy applies to all projects managed on AF allowance standards 886A through H, and any allowance standards approved in the future.

At DMLSS sites, medical logistics personnel will load the initial master inventory records and provide necessary DMLSS access and training to WMD-ER CBRNE team personnel for maintenance of inventory data. WMD-ER CBRNE team chiefs will maintain the materiel and inventory records using the DMLSS Assemblage Management module. DMLSS will interface with MRDSS to populate materiel availability percentage data.

At MEDLOG sites, WMD-ER CBRNE team chiefs will continue to use local spreadsheet or database processes to manage assemblages and medical readiness flight personnel will manually update materiel availability status through the MRDSS unit input module.

My POC is Maj Canales at DSN 297-5579, christopher.canales@pentagon.af.mil.
